**KARNATAKA**

**DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING**  
**CERTIFICATE**

This is to certify that the Internship report on “Automate Identification and Recognition of Handwritten texts from an image” submitted by **JASLINE SHARON TAURO 4AL18CS029** is work done by him/her and is submitted during the academic year 2021 – 2022, in partial fulfilment of the requirements for the award of the degree of **BACHELOR OF ENGINEERING** in **DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING** of **VISVESVARAYA TECHNOLOGICAL UNIVERSITY, BELAGAVI**. It is certified that all corrections/suggestions indicated for Internal Assessment have been incorporated in the report deposited in the departmental library. The Internship report has been approved as it satisfies the academic requirements in respect of Internship work prescribed for the Bachelor of Engineering Degree.

# CERTIFICATE *Of* INTERNSHIP

*This is to certify that*

**Jasline Sharon Tauro**

*has successfully completed Remote Internship*

*for 210 hours in project titled*

***Automate Identification and Recognition of Handwritten Text from an Image***

*by TCS iON from 13 Apr 2021 to 05 Jul 2021.*

**TCS iON REMOTE INTERNSHIPS**

Academic Credits with Industry Mentors

Cert. ID.: 358-11467763-1016

Dated: 05 Jul 2021

*Mehul Mehta*

**Mehul Mehta**

*Global Delivery Head - TCS iON,  
Tata Consultancy Services*

## **ACKNOWLEDGEMENT**

First, I would like to thank **Mr. MEHUL MEHTA, Global Delivery Head TCS iON** for giving me the opportunity to do an internship within the organization.

I would also like to thank **Mr. Debasish Roy** for mentoring me in **TCS iON** with their patience and openness they created an enjoyable working environment.

I am highly indebted to Managing Trustee **Mr. Vivek Alva** and **Principal Dr. Peter Fernandes, Alva's Institute of Engineering and Technology, Mijar** for the facilities provided to accomplish this internship.

I thank my Head of the Department **Dr. Manjunath Kotari, Professor, Department of Computer Science and Engineering** for his constructive criticism throughout my internship.

I am thankful to Internship coordinator, **Mrs. Merlyn Melita Mathias, Assistant Professor, Department of Computer Science and Engineering** for her valuable guidance, support and advices to get and complete internship in above said organization.

I would like to thank my internship guide **Mrs. Ankitha Shetty Assistant Professor Department of Computer Science and Engineering** for his constant help and support throughout the internship.

I am extremely grateful to my department staff members and friends who helped me in successful completion of this internship.

**JASLINE SHARON TAURO**

**4AL18CS029**

# **COMPANY PROFILE**

Tata Consultancy Services is an Indian multinational information technology services and consulting company.TCS iON is a business unit of Tata Consultancy Services(TCS). It is focused on empowering people with tech-led education to transform themselves for the new world.TCS iON offers a plethora of multiple learning courses for individual learners imparting a varied range of skills and proficiencies. TCS iON provides technology by means of a unique IT-as-a-Service model, offering end-to-end business solutions. It caters to the needs of multiple industry segments, through innovative, easy-to-use, secured, integrated, hosted solutions in a build-as-you-grow, pay-as-you-use business model. TCS iON serves its clients with the help of best practices gained through TCS' global experience, domestic market reach, skills, and delivery capabilities. TCS iON is highly modular, scalable and configurable giving businesses and educational institutions the benefits of increased efficiencies, faster go to market, predictability of technology as well as spend and better business results.Actually ion is the subsidiary of T.C.S, which is cloud IT platform. T.C.S work of making and maintain software and websites.The TCS iON this is the cloud platform for conducting online assessment and publishing there results.The TCS iON is S.M.B project work. Whose aim is likely digital India. The company want to conduct all online.TCS iON serves its clients with the help of best practices gained through TCS' global experience, domestic market reach, skills, and delivery capabilities. TCS iON's Cloud Based Solution is highly modular, scalable and configurable giving businesses and educational institutions the benefits of increased efficiencies, faster go to market, predictability of technology as well as spend and better business results

## **ABSTRACT**

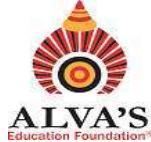

Handwritten text acknowledgment is yet an open examination issue in the area of Optical Character Recognition (OCR). This paper proposes a productive methodology towards the advancement of handwritten text acknowledgment frameworks. The primary goal of this task is to create AI calculation to empower element and information extraction from records with manually written explanations, with an, expect to distinguish transcribed words on a picture. The main aim of this project is to extract text, this text can be handwritten text or it can machine printed text and convert it into computer understandable or we can say computer editable format. To implement this project we have used pytesseract which is an open-source OCR engine used to recognize handwritten text and opencv a library in python used to solve computer vision problems. So the input image is executed in various steps, first there is preprocessing of an image then there is text localization after that there is character segmentation and character recognition and finally we have post-processing of image. Further image processing algorithms can also be used to deal with the multiple characters input in a single image, tilt image, or rotated image. The prepared framework gives a normal precision of more than 95% with the concealed test picture.

Friday	11-06-2021	Final report submission	Yes
Saturday	12-06-2021	Viva report submission	Yes

# **CHAPTER 1**

## **INTRODUCTION**

As we know nowadays there are different websites that are developed by the companies for various purposes, which require testing before deploying them to the market. This project is basically focused on identification and recognition of handwritten text from an image. It is based on enhancement of optical character recognition system. Optical character recognition or optical character reader is the electronic or mechanical conversion of images of typed, handwritten or printed text into machine-encoded text, whether from a scanned document, a photo of a document, a scene-photo or from subtitle text superimposed on an image. An optical character recognition problem is basically a type of image-based sequence recognition problem.

Extracting text of various sizes, shapes, and orientations from images is an essential problem in many contexts, especially in e-commerce, augmented reality assistance systems, and content moderation in social media platforms. To tackle this problem, one needs to accurately extract the text from images.

Basically, text extraction can be achieved into two steps, i.e., text detection and text recognition or by training a single model to achieve both text detection and recognition. Text detection helps identify the region in the image where the text is present. It takes in an image as an input, and the outputs bounding boxes. Text recognition extracts the text from the input image using the bounding boxes obtained from the text detection model. It takes in an image and some bounding boxes as inputs and outputs some raw text.

Text detection is very similar to the object detection task where the object which needs to be detected is nothing but the text. Much research has taken place in this field to detect text out of images accurately, and many of these detectors detect text at the word level. Few of the examples are:

Text Boxes

Text Boxes ++

EAST etc.

## **CHAPTER 2**

# **SYSTEM ANALYSIS**

System analysis is conducted for the purpose of studying a system or its parts in order to identify its objectives. It is a problem-solving technique that improves the system and ensures that all the components of the system work efficiently to accomplish their purpose.

### **2.1 Requirement Specification:**

To be used efficiently, all computer software needs certain hardware components or the other software resources to be present on a computer. These prerequisites are known as (computer) system requirements and are often used as a guideline as opposed to an absolute rule. Most software defines two sets of system requirements: minimum and recommended. With increasing demand for higher processing power and resources in newer versions of software, system requirements tend to increase over time. Industry analysts suggest that this trend plays a bigger part in driving upgrades to existing computer systems than technological advancements.

#### **2.1.1 Hardware Requirements:**

Hardware components deal with the basic hardware requirement to develop and to run any system. It includes processor, memory etc.

Hardware Constraints: PROCESSOR: 1.4GHz Intel core i5

RAM: 4GB

#### **2.1.2 Software Requirements:**

Software Requirements deal with defining software resource requirements and pre-requisites that need to be installed on a computer to provide optimal functioning of an application. These requirements or pre-requisites are generally not included in the software installation package and need to be installed separately before the software is installed.

### **Software Constraints:**

OPERATING SYSTEM: Linux or Windows

LANGUAGE: python

### **2.2 Language Used for Implementation:**

Python is a high-level, interpreted, general-purpose programming language. Its design philosophy emphasizes code readability with the use of significant indentation. Python is dynamically-typed and garbage-collected. It supports multiple programming paradigms, including structured (particularly procedural), object-oriented and functional programming. It is often described as a "batteries included" language due to its comprehensive standard library. Python was conceived in the late 1980s by Guido van Rossum at Centrum Wiskunde & Informatica (CWI) in the Netherlands as a successor to the ABC programming language, which was inspired by SETL, capable of exception handling and interfacing with the Amoeba operating system.

### **2.3 Platform Used for Implementation:**

- Google colab.

## **CHAPTER 3**

### **OBJECTIVE ACHIEVEMENT**

To develop machine learning algorithms in order to enable entity and knowledge extraction from documents with handwritten annotations, with an aim to first identify handwritten words on an image and then recognize the characters to transcribe the text. An optical character recognition problem is basically a type of image-based sequence recognition problem. And for sequence recognition problem, most suited neural networks are recurrent neural networks (RNN) while for an image-based problem most suited are convolution neural networks (CNN). To cop up with the OCR problems we need to combine both of these CNN and RNN. So, I used Convolutional Recurrent Neural Network (CRNN) to tackle the both the problems.

#### **3.1 Skills Learnt:**

##### **3.1.1 Python**

Python is a high-level, interpreted, general-purpose programming language. Its design philosophy emphasizes code readability with the use of significant indentation. Python is dynamically-typed and garbage-collected. It supports multiple programming paradigms, including structured (particularly procedural), object-oriented and functional programming. It is often described as a "batteries included" language due to its comprehensive standard library. Python was conceived in the late 1980s by Guido van Rossum at Centrum Wiskunde & Informatica (CWI) in the Netherlands as a successor to the ABC programming language, which was inspired by SETL, capable of exception handling and interfacing with the Amoeba operating system. Its implementation began in December 1989. Van Rossum shouldered sole responsibility for the project, as the lead developer, until 12 July 2018, when he announced his "permanent vacation" from his responsibilities as Python's "benevolent dictator for life", a title the Python community bestowed upon him to reflect his long-term commitment as the project's chief decision-maker. In January 2019, active Python core developers elected a five-member Steering Council to lead the project.

### **3.1.2 Open CV**

OpenCV is the huge open-source library for the computer vision, machine learning, and image processing and now it plays a major role in real-time operation which is very important in today's systems. By using it, one can process images and videos to identify objects, faces, or even handwriting of a human. When it integrated with various libraries, such as NumPy, python is capable of processing the OpenCV array structure for analysis. To identify image pattern and its various features we use vector space and perform mathematical operations on these features. The first OpenCV version was 1.0. OpenCV is released under a BSD license and hence it's free for both academic and commercial use. It has C++, C, Python and Java interfaces and supports Windows, Linux, Mac OS, iOS and Android. When OpenCV was designed the main focus was real-time applications for computational efficiency. All things are written in optimized C/C++ to take advantage of multi-core processing.

### **3.1.3 TensorFlow**

TensorFlow is a free and open-source software library for machine learning and artificial intelligence. It can be used across a range of tasks but has a particular focus on training and inference of deep neural networks. TensorFlow was developed by the Google Brain team for internal Google use in research and production. The initial version was released under the Apache License 2.0 in 2015. Google released the updated version of TensorFlow, named TensorFlow 2.0, in September 2019. TensorFlow can be used in a wide variety of programming languages, most notably Python, as well as JavaScript, C++, and Java.

### **3.1.4 Google colab**

Google is quite aggressive in AI research. Over many years, Google developed AI framework called TensorFlow and a development tool called Collaboratory. Today TensorFlow is open sourced and since 2017, Google made Collaboratory free for public use. Collaboratory is now known as Google Colab or simply Colab. Another attractive feature that Google offers to the developers is the use of GPU. Colab supports GPU and it is totally free.

## 3.2 Step-by-Step guide to creating Google-Colab and Deploying TensorFlow

### 3.2.1 Creating a document in a google colab

Google colab Chrome Extension If you want to create a machine learning model but say you don't have a computer that can take the workload, Google Colab is the platform for you. Even if you have a GPU or a good computer creating a local environment with anaconda and installing packages and resolving installation issues are a hassle. Collaborator is a free colab notebook environment provided by Google where you can use free GPUs and TPUs which can solve all these issues.

Opening Google Colab Notebook On opening the website you will see a pop-up containing following tabs

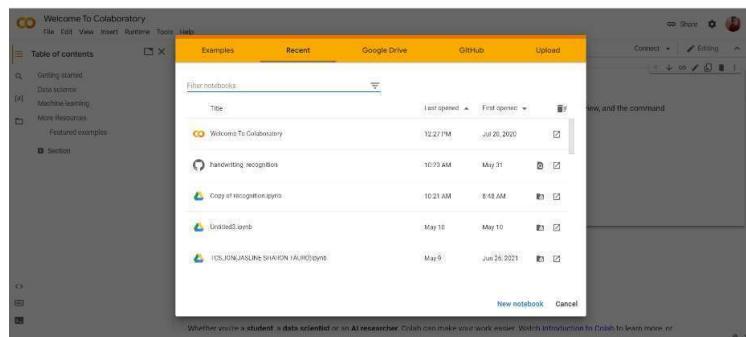

Fig 3.1: Google Colab Notebook

- EXAMPLES: Contain a number of Colab notebooks of various examples.
- RECENT: Colab notebook you have recently worked with.
- GOOGLE DRIVE: Colab notebook in your google drive
- . • GITHUB: You can add Colab notebook from your GitHub but you first need to connect Colab with GitHub
- . • UPLOAD: Upload from your local directory.

Else you can create a new Colab notebook by clicking New Python3 Notebook or New Python2 Notebook at the bottom right corner. On creating a new notebook, it will create a Colab notebook with Untitled0.ipynb and save it to your google drive in a folder named Colab Notebooks

# **CHAPTER 4**

## **IMPLEMENTATION**

### **4.1 Tools and Technologies**

#### **TensorFlow**

TensorFlow was developed by the Google Brain team for internal Google use in research and production. The initial version was released under the Apache License 2.0 in 2015. Google released the updated version of TensorFlow, named TensorFlow 2.0, in September 2019. TensorFlow can be used in a wide variety of programming languages, most notably Python, as well as Javascript, C++, and Java.

#### **Python**

Python is a high-level, interpreted, general-purpose programming language. Its design philosophy emphasizes code readability with the use of significant indentation. Python is dynamically-typed and garbage-collected. It supports multiple programming paradigms, including structured (particularly procedural), object-oriented and functional programming. It is often described as a "batteries included" language due to its comprehensive standard library.

#### **Jupiter Notebook**

Project Jupyter is a project and community whose goal is to "develop open-source software, open-standards, and services for interactive computing across dozens of programming languages". It was spun off from iPython in 2014 by Fernando Pérez and Brian Granger.

#### **Google colab**

Google is quite aggressive in AI research. Over many years, Google developed AI framework called TensorFlow and a development tool called Colaboratory. Today TensorFlow is open-sourced and since 2017, Google made Colaboratory free for public use. Colaboratory is now known as Google Colab or simply Colab

## Synthetic Word Dataset

The exact data used to train our deep convolutional neural networks is available below. This is synthetically generated dataset which we found sufficient for training text recognition on real-world images. This dataset consists of 9 million images covering 90k English words, and includes the training, validation and test splits used in our work.

### 4.2 Instructions

#### 1. Directory Structure:

Upload the Synthetic Word Dataset to the google drive.

#### 2. Uploading the Dataset on Google Drive and accessing it.

After uploading the dataset accessing the dataset after unzipping.

```
+ Code + Text ⚡ Copy to Drive
```

```
[ ] tf.__version__  
'2.8.2'  
[x]  
[ ] from google.colab import drive  
drive.mount('/content/drive')  
Drive already mounted at /content/drive; to attempt to forcibly remount, call drive.mount("/content/drive", force_remount=True).  
[ ] !unzip -qq /content/drive/My\ Drive/mjsynth_sample.zip  
replace mjsynth_sample/182_silking_71711.jpg? [y]es, [n]o, [A]ll, [N]one, [R]ename: A
```

**Fig 4.2.1: Uploading the Dataset**

#### 3. Preprocessing the Data.

After fetching the dataset, we will preprocess the data.

#### 4. Dividing the dataset into train, test and validation sets.

After splitting we have 760,895 train images, 256 test and validation images each.

## Automate identification and recognition of handwritten text from an image

```

# This actually returns h, w
h, w = img.shape

# If height less than 32
if h < 32:
    add_zeros = np.ones((32-h, w)) * 255
    img = np.concatenate((img, add_zeros))
    h = 32

# If width less than 128
if w < 128:
    add_zeros = np.ones((h, 128-w)) * 255
    img = np.concatenate((img, add_zeros), axis=1)
    w = 128

# If width is greater than 128 or height greater than 32
if w > 128 or h > 32:
    img = cv2.resize(img, (128, 32))

img = np.expand_dims(img, axis = 2)

# Normalize each image
img = img / 255.

images.append(img)
training.txt.append(encode_to_labels(text))
train_label_length.append(len(text))
train_input_length.append(h)

```

**Fig 4.2.2: Testing Dataset sets.**

## 5.Creating the defining the model/network architecture.

Adding the Pooling Layers, CNN Layers, Activation Functions, etc.

### 6.Training the model.

Using 30 epochs to train samples.

```

Epoch 0/0 [0/0] - Train: 97.44% - accuracy: 0.0000e+00
Epoch 0/0 [0/0] - Val: 97.44% - accuracy: 0.0000e+00

### 7.Saving the model.

Saving the model using HDF5 file extension.

Layer (type)	Output Shape	Param #
Input_2 (InputLayer)	[None, 32, 128, 1]	0
conv2d_7 (Conv2D)	(None, 32, 128, 16)	160
max_pooling2d_4 (MaxPooling2D)	(None, 16, 64, 16)	0
conv2d_8 (Conv2D)	(None, 16, 64, 32)	4640
max_pooling2d_5 (MaxPooling2D)	(None, 8, 32, 32)	0
conv2d_9 (Conv2D)	(None, 8, 32, 64)	18496
conv2d_10 (Conv2D)	(None, 8, 32, 64)	36928
max_pooling2d_6 (MaxPooling2D)	(None, 4, 32, 64)	0
conv2d_11 (Conv2D)	(None, 4, 32, 64)	36928
batch_normalization_2 (BatchNormalization)	(None, 4, 32, 64)	256

## 8. Testing the model

```

{x}  labels = Input(name='the_labels', shape=[max_label_len], dtype='float32')
    input_length = Input(name='input_length', shape=[1], dtype='int64')
    label_length = Input(name='label_length', shape=[1], dtype='int64')

{[x]} def ctc_lambda_func(args):
    y_pred, labels, input_length, label_length = args
    return k.ctc_batch_cost(labels, y_pred, input_length, label_length)

loss_out = Lambda(ctc_lambda_func,
                  output_shape=(1,),
                  name='ctc')([outputs, labels, input_length, label_length])

#model to be used at training time
model = Model(inputs=[inputs, labels, input_length, label_length], outputs=loss_out)

[ ] file_path = "c_lstm_best.hdf5"

model.compile(loss='ctc', optimizer='adam', metrics=['accuracy'])

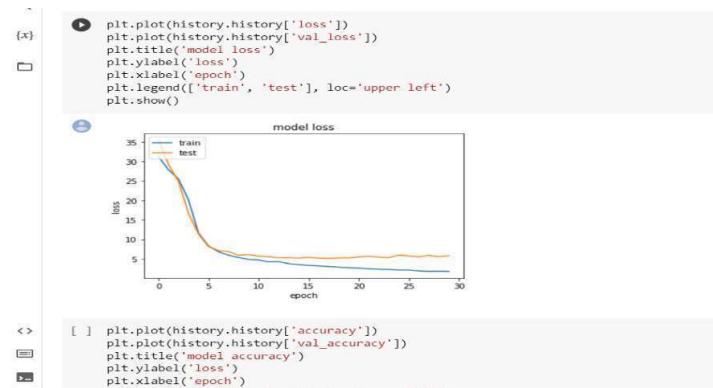

checkpoint = ModelCheckpoint(filepath=file_path,
                             monitor='val_loss',
                             verbose=1,
                             save_best_only=True,
                             mode='min')

callbacks_list = [checkpoint]

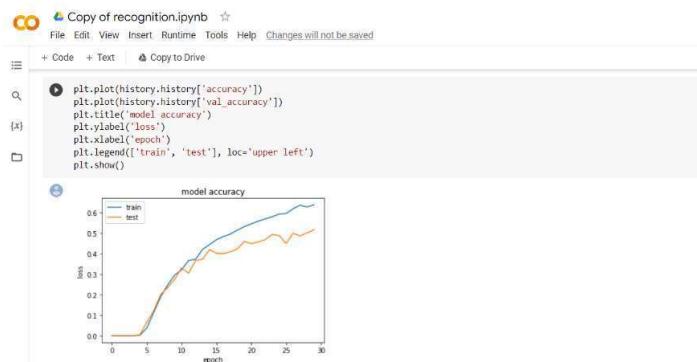

```

## **CHAPTER 5**

### **CONCLUSION**

In this project classification of characters takes place. The project is achieved through the conventional neural network. The accuracy we obtained in this is above 78.3%. This algorithm will provide both the efficiency and effective result for the recognition. The project gives best accuracy for the text which has less noise. The accuracy completely depending on the dataset if we increase the data, we can get more accuracy. If we try to avoid cursive writing then also it gives best results. Future Work: In future we are planning to extend this study to a larger extent where different embedding models can be considered on large variety of the datasets. The future is completely based on technology no one will use the paper and pen for writing. In that scenario they used write on touch pads so the inbuilt software which can automatically detects text which they writing and convert into digital text so that the searching and understanding very much simplified.
